

1-pc Light Gauge Steel Canopy

Description

FPPI's One Piece Light Gauge canopies provide a simple, low cost and effective choice for the installation of fire sprinklers in either a pendent or sidewall application. The one piece canopy provides an aesthetically pleasing concealment of the sprinkler piping servicing the individual sprinkler head. Stainless Steel construction provides years of service life even in outside environments.

Installation

Proper installation of the sprinkler canopy can be accomplished with tools ordinarily found on the job site. The installer must make sure that the face of the reducing coupling to which the sprinkler and canopy are installed must not extend more than .5" past the finished ceiling. Slip the escutcheon over the sprinkler threads then install the sprinkler into the reducing coupling according

to the sprinkler manufacturers installation instructions.
