

Plastic Rod Buttons

Description

FPPI Rod Buttons for 3/8" threaded hanger rod provide a method of concealing rod penetration through finished surfaces and are manufactured from injection molded plastic. Plastic provides superior corrosion resistance over all other materials. Available in White or Chrome finish.

Installation

Place the rod button over the end of the installed hanger rod prior to installation of the pipe hanger. Push the rod button along the rod until it is firmly seated against the surface perpendicular to the rod. The rod button is held in place due to segmentation of the rod button around the opening for the hanger rod. No special tools are required. Please use caution when sliding the rod button

into place. Threaded materials may have sharp edges and contact with these surfaces may cause minor injury. Use gloves to protect your hands while working with these materials.

Specifications

Material: Injection Molded Plastic

Size: 3/8"-16 Rod

Finish:
Chrome
White
